Did you know that a residential burglary occurs in the US approximately every 12 seconds?! Many of these crimes have one thing in common -- a garage door left open. Law enforcement officials know that criminals frequently look for easy targets and an open garage door is a blatant invitation to crime -- even during broad daylight.

Have you ever arrived home to find that you left your garage door open when you left home? Have you ever gone out to your garage in the morning, only to realize that you left your garage door open all night?

Don't become the next target for burglary (or worse)!

GarageHawk, our new home security system, lets you know when your garage door is open and allows you to close it remotely from anywhere in your home. GarageHawk was created specifically to address the problem of inadvertently leaving your garage door open. The patented microprocessor-controlled technology allows you to remotely close your garage door but will never open a door that is already closed.

The GarageHawk system provides a visual garage door status indication via a small plug-in remote module. Easy to install by the homeowner, GarageHawk works over the existing power lines in your home so no home re-wiring or batteries are needed. The system does not interfere with regular garage door opener operation, garage door sensors or other garage door safety features.

GarageHawk can also be used in multiple garage door environments. You can add additional Garage Modules and/or Remote Modules to accommodate your individual home arrangement, allowing remote monitoring and closure of any number of additional garage doors and, if desired, from multiple locations in the home.

Additionally, when used with a compatible home automation controller, the system will allow you to monitor and close your garage door(s) from anywhere in the world via a telephone or internet connection.

GarageHawk is also compatible with popular home automation technologies, allowing for additional functionality when the garage door is open -- for example, providing pathway lighting and/or audible notification, or telling your garage thermostat to temporarily set back.

Be safe -- don't risk your family's safety or the loss of your valuable possessions. ***Never forget to close your garage door again!***

Dealers and affiliates are welcome; GarageHawk makes a great closing gift for realtors.
